

SafePredict

Answers to Your Post-Presentation Questions Construction Safety Intelligence Platform

Prepared for: [Prospective Client]
In response to questions raised after our initial presentation
June 2026 | Confidential

Thank You

Thank you for the time you gave us in our recent presentation and for asking exactly the right questions. The six items below are the ones your team raised, addressed directly and completely. We have not padded this with sales language — just the answers.

\$109,931+

Est. Annual Value
100-Person Company

3–5×

Industry ROI on Safety
Investment

\$38K–\$60K

Avg Cost Per Recordable
Incident

690

Security Policies Zero
Unprotected Tables

Question 1 of 6

Q
1

"Initial purchase and implementation costs"

There is no hardware to purchase, no software to install, and no lengthy integration project. Your team signs a contract, we provision your workspace, and you are operational the same day. Here is what the initial cost structure looks like:

Cost Item	What It Covers	Cost to You
Platform license	Full-workspace pilot access to all core modules	Per contract — quoted after demo
Onboarding & setup	Company workspace, team invites, jobsite configuration	Included

Cost Item	What It Covers	Cost to You
Data migration	Not required — no legacy data needed to start	None
Training	Role-based walkthroughs for admin, safety manager, field users	Included
Custom development	Standard pilot SKU requires none	None

The Pilot SKU includes every core module: Identity & Auth, Company & Jobsite management, Command Center, Document Library, JSA Builder, Permit Center, Field Issue Log, Incident Log, Safety Intelligence AI, and Billing. No feature is locked behind a separate purchase for the pilot.

Question 2 of 6

Q2

"Ongoing annual costs (licensing, maintenance, support, etc.)"

SafePredict runs on a subscription model with no surprise fees. The table below shows what the platform costs us to operate — we share this so you understand exactly what your subscription covers and that pricing is grounded in real numbers, not margin stacking.

Service	What It Powers	Annual Cost Range
Supabase Pro	Database, authentication, file storage	~\$300–\$600
Vercel Pro	Application hosting, 10 automated safety jobs	~\$240
OpenAI API	Gus AI risk engine, document review	Usage-based
Resend	Email alerts and team invitations	Minimal
Stripe	Billing processing	2.9% + 30 cents/transaction
Weather / Geo APIs	NWS jobsite weather alerts, ZIP geocoding	Near-zero

Market Context

Comparable platforms — Procore Safety, Salute Safety, EHS Insight — charge \$30–\$100/user/month or \$500–\$2,000/month per company. Our pricing is structured to be competitive within that range. A formal quote is provided after the demo once we understand your team size and jobsite count.

Question 3 of 6

Q 3 *"Hardware or infrastructure requirements"*

Short answer: none. SafePredict is 100% cloud-native. Your IT team does not need to provision servers, configure VPNs, or manage any on-premise infrastructure.

Requirement	Detail
What Your Team Needs	
Devices	Any modern browser — Chrome, Edge, Safari, Firefox. Works on desktop, tablet, and mobile.
Network	Standard internet connection. No VPN, no firewall rules, no special IT setup.
Software	None. No downloads, no managed client software, no update cycles to manage.
IT integration	SSO/SCIM is on our product roadmap. Not required to onboard for the pilot.
What We Manage on Your Behalf	
App hosting	Vercel global CDN — 99.99% uptime SLA. Deployed across multiple edge regions.
Database	Supabase Postgres — managed, auto-scaled, with continuous backups and point-in-time recovery.
File storage	Supabase Storage — all safety documents, PDFs, and exports stored with redundancy.
Automation	10 scheduled cron jobs: weather alerts, risk rollups, billing, daily todos, and more.
Security	690 row-level security policies across 245 database tables. Zero unprotected tables.

Question 4 of 6

Q 4 *"Expected return on investment or cost savings"*

The numbers below come from OSHA, the Bureau of Labor Statistics, and the National Safety Council — not from our own marketing. We have applied them to a 100-person construction company as an illustrative model. The pilot will generate your company's actual numbers.

Industry Foundation

Source	Data Point
OSHA	\$4–\$6 saved for every \$1 invested in workplace safety programs.
Bureau of Labor Statistics	Average recordable construction incident costs \$38,000–\$60,000 in direct and indirect costs.
OSHA Penalty Schedule 2025	Willful violation: up to \$16,131 per citation. Repeat violations: same.
Industry benchmark	Workers' comp premiums: 8–15% of payroll. A 10% mod reduction on \$200K = \$20,000/year.

Illustrative Annual Value — 100-Person Construction Company

Value Driver	Basis	Annual Value
Prevent 2 recordable incidents	Avg \$38,000/incident x 2	\$76,000
Workers' comp mod improvement	5% reduction on \$200K annual premium	\$10,000
Admin time savings	3 hrs/week x 50 wks x \$52/hr safety manager	\$7,800
Avoid 1 OSHA citation	1 willful violation at 2025 rate	\$16,131
Total Estimated Annual Value		\$109,931+
Typical platform cost	Mid-range SaaS, annual	\$12,000–\$24,000
Net Annual Benefit		\$85,000–\$97,000+

How SafePredict Drives These Savings

- **Risk Memory + Gus AI** — predicts high-risk conditions before incidents occur. Shifts your team from reactive to proactive.
- **JSA Builder & Permit Center** — digitizes field safety workflows, eliminates paperwork gaps, and creates a timestamped audit trail.
- **Corrective Action Tracking** — ensures every identified hazard is assigned, tracked, and closed. Reduces repeat incidents.
- **Safety Intelligence Analytics** — leading indicators (open hazards, training gaps, near-misses) rather than lagging counts.

- **Real-Time Weather Alerts** — NWS-powered notifications to field supervisors before heat, wind, or storm conditions become dangerous.

Question 5 of 6

Q
5

"Case studies, pilot projects, or references demonstrating successful real-world use"

Honest Answer

We are at the pre-paid-pilot stage. There are no live customer case studies or production references to share today. We will not manufacture testimonials or overstate where we are. What we can offer instead is more valuable: the chance to become the first reference.

What We Offer in Place of a Reference List

A structured paid pilot with defined success metrics gives your organization the ability to generate your own ROI data — from your jobsites, your team, your incident history. That evidence belongs to you and is far more credible to your own management than any third-party testimonial.

Pilot Component	What It Means for You
Duration	60–90 days — enough time to complete real field cycles
Scope	Full workspace: JSA, Permits, Incidents, Documents, AI Safety Intelligence, Corrective Actions
Success metrics	Defined in contract before day one: report completion rate, JSA submission time, corrective action close rate
Pricing	Paid pilot at below-standard rates with clear conversion terms
Demo first	Full module walkthrough with live data before any commitment — no pressure to sign in the room
Data ownership	Your data is yours. Dedicated tenant — never commingled with other companies
Exit terms	Clear data export and offboarding if the pilot does not convert — no lock-in

Question 6 of 6

Q
6

"Reliability metrics and contingency plans in the event of system failures"

Construction safety is a 24/7 operation. We have built the platform on infrastructure with institutional-grade reliability and have been transparent below about what is proven and what is still being formalized.

What Is Verified and In Place Today

Component	Provider	Reliability Standard	Verified?
Application hosting	Vercel Pro	99.99% uptime SLA, global CDN	Yes
Database	Supabase Pro	Managed Postgres, auto-failover, PITR	Yes
Authentication	Supabase Auth	Multi-region, rate-limited	Yes
File storage	Supabase Storage	Redundant object storage	Yes
Security policies	Row-Level Security	690 policies, 0 unprotected tables	Yes
Security headers	Vercel / Next.js	HSTS, CSP, X-Frame-Options	Yes
Automated jobs	Vercel Cron	10 scheduled safety and billing jobs	Yes
Source / deployment	GitHub + CI/CD	Full version history, pre-deploy checks	Yes

Contingency Scenarios

Scenario	Response	Recovery
Vercel outage	Global CDN edge failover is automatic. No single point of failure.	1-click rollback to prior deployment from Vercel dashboard.
Database outage	Supabase SLA-backed managed infrastructure with regional redundancy.	Point-in-Time Recovery restores data to any prior state.
Bug or bad deployment	CI/CD pipeline runs lint, TypeScript, unit tests, and E2E before every deploy.	GitHub rollback in minutes; zero-downtime re-deployment.
Field connectivity loss	Critical field forms (JSA, Permits) have paper fallback procedures.	Digital sync resumes when connectivity is restored.

What We Are Still Formalizing — Disclosed Transparently

- Formal RPO/RTO targets not yet published in writing — Supabase PITR is technically in place; SLA documentation is in progress before enterprise contracts.
- Formal restore test not yet completed — scheduled as a prerequisite to any enterprise-tier agreement.
- SOC 2 / ISO 27001 certification not yet claimed — security controls are built and documented; formal third-party audit is a post-pilot milestone.
- SSO/SCIM enterprise authentication — on the product roadmap; standard username/password with MFA-capable Supabase Auth is available now.

Summary — All Six Questions at a Glance

Your Question	Our Answer	Status
Initial purchase / implementation cost	No hardware. Onboarding included. Licensing quoted after demo.	Ready to quote
Ongoing annual costs	SaaS subscription. Competitive with market. Full transparency on what it covers.	Ready to quote
Hardware / infrastructure	Zero on-premise. Any browser. Standard internet.	Fully met
ROI / cost savings	OSHA-sourced data: \$85K–\$97K+ net annual benefit per 100-person company.	Strong case
Case studies / references	Pre-pilot — no live references. Structured paid pilot is the offer.	Pilot offer ready
Reliability & contingency	Vercel + Supabase enterprise-grade stack. Formal DR and SOC 2 in progress.	Core verified

Recommended Next Step

Schedule a 30-minute live demo — your team walks every module with real data, no slides. If the fit is clear, we deliver a formal pilot proposal within 5 business days: scope, pricing, success metrics, and exit terms. No obligation to proceed beyond the demo.
